SPARMANIK FARM · CROP INSTRUCTION BOOKLET

Oct to Jan Harvest

Melon · 2026–27 crop · follow it day by day

SOWN IN POLYBAGS **Sunday 25 Oct 2026**	HST 0 **Wednesday 4 Nov 2026**	HARVEST FROM **Monday 18 Jan 2027**
TO FLOWER **Sunday 29 Nov 2026**	TO SIZING **Wednesday 16 Dec 2026**	TO RIPEN **Sunday 3 Jan 2027**

Varieties & rows: _____

Person in charge: _____ · Call Boyd: _____

Matches the Sparmanik 4.0 book. If this and the big book differ, follow this one and ask Boyd.

EVERY DAY

Do this every day

1. **6:30 tank check:** EC as this week says, pH 5.8–6.3. Photo to Boyd.
2. **Walk every row in the morning.** Dry bag? Blocked dripper? Split/rotten fruit → out.
3. **Krisbow meter 8 · 10 · 12 · 2.** Humidity under temperature × 2 → mist leaves 5–10 min (last 3:30 pm).
4. **Do the jobs on this week's page**, tick the box.

5 rules — never break them

1. Boroni only in the FLOWER stock. Boric acid, Fe-EDTA, citric acid banned.
2. Silicon only 5 times (to HST 36).
3. From HST 38: no plain water, no hand watering.
4. RIPEN feed to the last fruit.
5. Drums A and B are never mixed.

Not sure? Stop and call Boyd.

HOW TO

Jobs marked ★

★ Trichoderma

10 g in a 10 L bucket of plain water, stand 15–30 min. Water the bags first, then one cup (250 ml) at the stem base. Never through the tank.

★ Silicon (Kalsika)

MANUAL switch. 400 L water → run 3 min → one 100 g sachet, stir until clear → run 8 min → top up to 100 L → run 3 min until empty → make the normal feed tank. That day water only at 2 and 5 pm.

★ Tri-Pholate

2 g per 16 L spray pack. Leaves only. After 4 pm.

★ Calcinit spray

80 g per 16 L spray pack. Early morning or after 4 pm. Leaves only.

★ Pollinate

6–10 am. Female flowers (tiny fruit behind the flower) on nodes 9–12 → dab pollen from a male flower of the same plant. Write the date on the tag.

★ Keep 1 fruit + top

Keep the ONE best fruit per plant, remove the rest. Cut the tip above leaf 25. No fruit → don’t top.

★ Harvest

6–9:30 am. Ripe = full net, yellow underside, smells sweet, slips off with a gentle twist. Cut with scissors, into the shade, weigh, write it down. Don’t cut any other fruit.

OCT TO JAN HARVEST · Sun 25 Oct 2026 – Sat 31 Oct 2026

Week 1

Seedlings

Day	HST	EC	Today's jobs	✓
Sun 25 Oct seedling day 0	—	**0.5** 2 × 3 min	Seed sown into the polybags	☐
Mon 26 Oct seedling day 1	—	**0.5** 2 × 3 min	Keep the cocopeat damp, not soggy	☐

STOCK-MIXING NIGHTS

Drum recipe per stage

50 L drum = 10 tanks · 25 L = 5 tanks (5 days). Feed strength never changes.

S1 · GROW — now (seedlings) to HST 24

Product	50 L	25 L
A · Calcinit	8.70 kg	4.35 kg
A · Krista K Plus	3.45 kg	1.73 kg
B · Krista MKP	2.20 kg	1.10 kg
B · MAG-S	5.70 kg	2.85 kg
B · Vitaflex	200 g	100 g
B · Fe-EDDHA	50 g	25 g

Per 1,000 L tank: 5 L A + 5 L B · EC 2.1

S2 · FLOWER — night of Sat 28 Nov 2026

Product	50 L	25 L
A · Calcinit	9.45 kg	4.72 kg
A · Karate Plus Boroni	800 g	400 g
A · Krista K Plus	1.15 kg	575 g
B · Krista MKP	2.30 kg	1.15 kg
B · MAG-S	6.05 kg	3.02 kg
B · Vitaflex	200 g	100 g
B · Fe-EDDHA	50 g	25 g

Per 1,000 L tank: 5 L A + 5 L B + SOP 310 g · EC 2.4

S3 · SIZING — night of Tue 15 Dec 2026

Product	50 L	25 L
A · Calcinit	9.45 kg	4.72 kg
B · Krista MKP	2.10 kg	1.05 kg
B · MAG-S	6.25 kg	3.12 kg
B · Vitaflex	200 g	100 g
B · Fe-EDDHA	50 g	25 g

Per 1,000 L tank: 5 L A + 5 L B + SOP 535 g · EC 2.55

S4 · RIPEN — night of Sat 2 Jan 2027

Product	50 L	25 L
A · Calcinit	8.95 kg	4.47 kg
B · Krista MKP	1.85 kg	925 g
B · MAG-S	6.25 kg	3.12 kg
B · Vitaflex	200 g	100 g
B · Fe-EDDHA	50 g	25 g

Per 1,000 L tank: 5 L A + 5 L B + SOP 645 g · EC 2.7

How to fill a drum — half fill with warm water → weigh one product, pour, stir until **CLEAR** → only then the next → top up to the 50 L (or 25 L) mark → write A/B + date + stage.

Never — put an A product in drum B · boric acid · Fe-EDTA · citric acid · SOP or silicon into a drum. SOP goes straight into the 1,000 L tank.

HARVEST LOG

Daily harvest log
